

6. A mass is attached to one end of a rod and made to rotate with constant speed in a vertical circle.

- (a) The scale diagram shows the weight W of the mass at an instant when the rod is horizontal.

Draw, on the scale diagram, an arrow to represent the force exerted on the mass by the rod.

[2]

- (b) Explain why the magnitude of the force exerted on the mass by the rod is not constant. [3]
