

57. A stone of mass m is projected vertically upwards with speed u from the top of a cliff. The speed of the stone when it is just about to hit the ground is v .

What is the magnitude of the change in momentum of the stone?

- A. $m\left(\frac{v+u}{2}\right)$
- B. $m\left(\frac{v-u}{2}\right)$
- C. $m(v+u)$
- D. $m(v-u)$
