

58. A car accelerates uniformly. The car passes point X at time t_1 with velocity v_1 and point Y at time t_2 with velocity v_2 . The distance XY is s .

The following expressions are proposed for the magnitude of its acceleration a :

I.
$$a = \frac{2s}{(t_2 - t_1)^2}$$

II.
$$a = \frac{v_2^2 - v_1^2}{2s}$$

III.
$$a = \frac{v_2 - v_1}{t_2 - t_1}$$

Which is correct?

- A. I and II only
B. I and III only
C. II and III only
D. I, II and III
