

PAPER 1 / QUESTION 68

2223-6513 / original question 6

68. A spring of negligible mass is compressed and placed between two stationary masses m and M . The mass of M is twice that of m . The spring is released so that the masses move in opposite directions.

What is $\frac{\text{kinetic energy of } m}{\text{kinetic energy of } M}$?

- A. $\frac{1}{2}$
- B. 1
- C. 2
- D. 4
