

PAPER 1 / QUESTION 91

2224-6701 / original question 6

91. A particle X has a small positive charge and is free to move. Y has a large positive charge and is fixed. X is initially moving towards Y.

Y exerts an electric force F on X. Gravitational forces are negligible.

The magnitude of the force exerted by X on Y is

- A. zero.
- B. less than the magnitude of F .
- C. equal to the magnitude of F .
- D. greater than the magnitude of F .
