

PAPER 1 / QUESTION 104

2224-6707 / original question 23

104. The wind generator equation can be used to estimate the power produced by a wind turbine from a given set of conditions.

Which assumption is **not** used in the derivation of this equation?

- A. The number of blades on the turbine is a constant.
- B. Speed of air particles after passing through the turbine is zero.
- C. Speed of air particles approaching the turbine cross-sectional area is constant.
- D. Turbulence created by the spinning turbine is negligible.
